Background:	This gene is similar to the protein kinase, X-linked gene in the pseudoautosomal region of the X chromsoome. The gene is classified as a transcribed pseudogene because it has lost a coding exon that results in all transcripts being candidates for nonsense-mediated decay (NMD) and unlikely to express a protein. Abnormal recombination between this gene and a related gene on chromosome X is a frequent cause of XX males and XY females.
Synonyms:	OTTHUMP00000033227; protein kinase, Y-linked

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PRKY ([RC210438], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRKY. Positive lysates [LY400977] (100ug) and [LC400977] (20ug) can be purchased separately from OriGene.
