#### **GRIGENE** ATP5F1B Mouse Monoclonal Antibody [Clone ID: OTI9E3] – TA500835

**Background:** This gene encodes a subunit of mitochondrial ATP synthase. Mitochondrial ATP synthase catalyzes ATP synthesis, utilizing an electrochemical gradient of protons across the inner membrane during oxidative phosphorylation. ATP synthase is composed of two linked multi-subunit complexes: the soluble catalytic core, F1, and the membrane-spanning component, Fo, comprising the proton channel. The catalytic portion of mitochondrial ATP synthase consists of 5 different subunits (alpha, beta, gamma, delta, and epsilon) assembled with a stoichiometry of 3 alpha, 3 beta, and a single representative of the other 3. The proton channel consists of three main subunits (a, b, c). This gene encodes the beta subunit of the catalytic core.

Synonyms: ATPMB; ATPSB; HEL-S-271

Protein Families: Druggable Genome

Protein Pathways:Alzheimer's disease, Huntington's disease, Metabolic pathways, Oxidative phosphorylation,<br/>Parkinson's disease

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ATP5B ([RC201638], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ATP5B. Positive lysates [LY400637] (100ug) and [LC400637] (20ug) can be purchased separately from OriGene.
