Background: This gene encodes a member of the claudin family. Claudins are integral membrane proteins

and components of tight junction strands. Tight junction strands serve as a physical barrier to

prevent solutes and water from passing freely through the paracellular space between epithelial or endothelial cell sheets. Mutations in this gene have been found in patients with velocardiofacial syndrome. Alternatively spliced transcript variants encoding the same

protein have been found for this gene. [provided by RefSeq]

Anti-CLDN5 mouse monoclonal antibody ([TA500843]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY CLDN5 ([RC207122]).

HEK293T cells transfected with either [RC207122] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-CLDN5 antibody ([TA500843]), and then analyzed by flow cytometry.
