# Product datasheet for TA500931S

### PSMC3 Mouse Monoclonal Antibody [Clone ID: OTI7B10]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI7B10
Applications:	FC, IF, WB
Recommended Dilution:	WB 1:2000, IF 1:100, Flow 1:100
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human PSMC3(NP_002795) produced in HEK293T cell.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.57 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	49.2 kDa
Gene Name:	proteasome 26S subunit, ATPase 3
Database Link:	<u>NP_002795</u> <u>Entrez Gene 19182 MouseEntrez Gene 29677 RatEntrez Gene 5702 Human</u> <u>P17980</u>

#### SMC3 Mouse Monoclonal Antibody [Clone ID: OTI7B10] – TA500931S

Background:The 26S proteasome is a multicatalytic proteinase complex with a highly ordered structure<br/>composed of 2 complexes, a 20S core and a 19S regulator. The 20S core is composed of 4<br/>rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are<br/>composed of 7 beta subunits. The 19S regulator is composed of a base, which contains 6<br/>ATPase subunits and 2 non-ATPase subunits, and a lid, which contains up to 10 non-ATPase<br/>subunits.Proteasomes are distributed throughout eukaryotic cells at a high concentration<br/>and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An<br/>essential function of a modified proteasome, the immunoproteasome, is the processing of<br/>class I MHC peptides. This gene encodes one of the ATPase subunits, a member of the triple-A<br/>family of ATPases that have chaperone-like activity. This subunit may compete with PSMC2<br/>for binding to the HIV tat protein to regulate the interaction between the viral protein and the<br/>transcription complex. A pseudogene has been identified on chromosome 9.

Synonyms:DCIDP; RPT5; TBP1Protein Families:Druggable Genome, Transcription FactorsProtein Pathways:Proteasome

#### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PSMC3 ([RC201790], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PSMC3. Positive lysates [LY400992] (100ug) and [LC400992] (20ug) can be purchased separately from OriGene.

Anti-PSMC3 mouse monoclonal antibody ([TA500931]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY PSMC3 ([RC201790]).

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Events

M Martin Martin

HEK293T cells transfected with either pCMV6-ENTRY PSMC3 ([RC201790]) (Red) or empty vector control plasmid (Blue) were immunostained with anti-PSMC3 mouse monoclonal ([TA500931]), and then analyzed by flow cytometry.

Immunofluorescent staining of HepG2 cells using anti-PSMC3 mouse monoclonal antibody

([TA500931]).

PSMC3

Flow cytometric analysis of Hela cells, using anti-PSMC3 antibody ([TA500931]), (Red) compared to a nonspecific negative control antibody (TA50011) (Blue).
