STATES ORIGENE PTP epsilon (PTPRE) Mouse Monoclonal Antibody [Clone ID: OTI3B8] – TA501027

Background:The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)
family. PTPs are known to be signaling molecules that regulate a variety of cellular processes
including cell growth, differentiation, mitotic cycle, and oncogenic transformation. Two
alternatively spliced transcript variants of this gene have been reported, one of which
encodes a receptor-type PTP that possesses a short extracellular domain, a single
transmembrane region, and two tandem intracytoplasmic catalytic domains; Another one
encodes a PTP that contains a distinct hydrophilic N-terminus, and thus represents a
nonreceptor-type isoform of this PTP. Studies of the similar gene in mice suggested the
regulatory roles of this PTP in RAS related signal transduction pathways, cytokines induced
SATA signaling, as well as the activation of voltage-gated K+ channels.

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PTPRE ([RC207950], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PTPRE. Positive lysates [LY401950] (100ug) and [LC401950] (20ug) can be purchased separately from OriGene.

Anti-PTPRE mouse monoclonal antibody (TA501027) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY PTPRE ([RC207950]).

HEK293T cells transfected with either [RC207950] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PTPRE antibody (TA501027), and then analyzed by flow cytometry.
