	SHC (SHC1) Mouse Monoclonal Antibody [Clone ID: OTI3H1] – TA501103M
Background:	Signaling adapter that couples activated growth factor receptors to signaling pathway. Isoform p46Shc and isoform p52Shc, once phosphorylated, couple activated receptor tyrosine kinases to Ras via the recruitment of the GRB2/SOS complex and are implicated in the cytoplasmic propagation of mitogenic signals. Isoform p46Shc and isoform p52Shc may thus function as initiators of the Ras signaling cascade in various non-neuronal systems. Isoform p66Shc does not mediate Ras activation, but is involved in signal transduction pathways that regulate the cellular response to oxidative stress and life span. Isoform p66Shc acts as a downstream target of the tumor suppressor p53 and is indispensable for the ability of stress- activated p53 to induce elevation of intracellular oxidants, cytochrome c release and apoptosis. The expression of isoform p66Shc has been correlated with life span

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SHC1 ([RC204362], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SHC1. Positive lysates [LY401060] (100ug) and [LC401060] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either pCMV6-ENTRY SHC1 ([RC204362]) (Red) or empty vector control plasmid (Blue) were immunostained with anti-SHC1 mouse monoclonal ([TA501103]), and then analyzed by flow cytometry.
