MPP3 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI8F1] - TA501303AM

Background: This gene product is a member of a family of membrane-associated proteins termed MAGUKs (membrane-associated guanylate kinase homologs). MAGUKs interact with the cytoskeleton and regulate cell proliferation, signaling pathways, and intracellular junctions. This protein contains a conserved sequence, called the SH3 (src homology 3) motif, found in several other proteins that associate with the cytoskeleton and are suspected to play important roles in signal transduction. Alternatively spliced transcript variants have been identified. One transcript variant is experimentally supported, but it doesn't encode a protein. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY MPP3 (Cat# [RC208903], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MPP3(Cat# [TA501303]). Positive lysates [LY419634] (100ug) and [LC419634] (20ug) can be purchased separately from OriGene.

Anti-MPP3 mouse monoclonal antibody ([TA501303]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY MPP3 ([RC208903]).
