SH3PX1 (SNX9) Mouse Monoclonal Antibody [Clone ID: OTI2A11] – TA501323S

Background:This gene encodes a member of the sorting nexin family. Members of this family contain a
phox (PX) domain, which is a phosphoinositide binding domain, and are involved in
intracellular trafficking. This protein does not contain a coiled coil region, like some family
members, but does contain a SH3 domain near its N-terminus. This protein interacts with the
cytoplasmic domains of the precursor but not the processed forms of a disintegrin and
metalloprotease domain 9 and 15. This protein binds the beta-appendage domain of adaptor
protein 2 and may function to assist adaptor protein 2 in its role at the plasma membrane.
This protein interacts with activated Cdc42-associated kinase-2 to regulate the degradation of
epidermal growth factor receptor protein.

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SNX9 ([RC202822], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SNX9. Positive lysates [LY402520] (100ug) and [LC402520] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-SNX9 monoclonal antibody.
