#### SH3PX1 (SNX9) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2F1] – TA501326BM

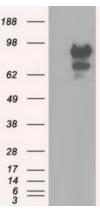

Background:This gene encodes a member of the sorting nexin family. Members of this family contain a<br/>phox (PX) domain, which is a phosphoinositide binding domain, and are involved in<br/>intracellular trafficking. This protein does not contain a coiled coil region, like some family<br/>members, but does contain a SH3 domain near its N-terminus. This protein interacts with the<br/>cytoplasmic domains of the precursor but not the processed forms of a disintegrin and<br/>metalloprotease domain 9 and 15. This protein binds the beta-appendage domain of adaptor<br/>protein 2 and may function to assist adaptor protein 2 in its role at the plasma membrane.<br/>This protein interacts with activated Cdc42-associated kinase-2 to regulate the degradation of<br/>epidermal growth factor receptor protein. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SNX9 ([RC202822], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SNX9. Positive lysates [LY402520] (100ug) and [LC402520] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-SNX9 monoclonal antibody.
