# Product datasheet for TA501425S

# Ephrin A2 (EFNA2) Mouse Monoclonal Antibody [Clone ID: OTI1C9]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1C9
Applications:	FC, WB
Recommended Dilution:	WB 1:500~2000, FLOW 1:100
Reactivity:	Human, Mouse, Rat
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human EFNA2 (NP_001396) produced in HEK293T cell.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.77 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	21.3 kDa
Gene Name:	ephrin A2
Database Link:	<u>NP_001396</u> <u>Entrez Gene 13637 MouseEntrez Gene 1943 Human</u> <u>O43921</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **GRIGENE** Ephrin A2 (EFNA2) Mouse Monoclonal Antibody [Clone ID: OTI1C9] – TA501425S

Background:This gene encodes a member of the ephrin family. The protein is composed of a signal<br/>sequence, a receptor-binding region, a spacer region, and a hydrophobic region. The EPH<br/>and EPH-related receptors comprise the largest subfamily of receptor protein-tyrosine<br/>kinases and have been implicated in mediating developmental events, particularly in the<br/>nervous system. Based on their structures and sequence relationships, ephrins are divided<br/>into the ephrin-A (EFNA) class, which are anchored to the membrane by a<br/>glycosylphosphatidylinositol linkage, and the ephrin-B (EFNB) class, which are<br/>transmembrane proteins. Posttranslational modifications determine whether this protein<br/>localizes to the nucleus or the cytoplasm. [provided by RefSeq]

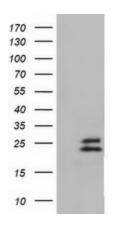

Synonyms: ELF-1; EPLG6; HEK7-L; LERK-6; LERK6

Axon guidance

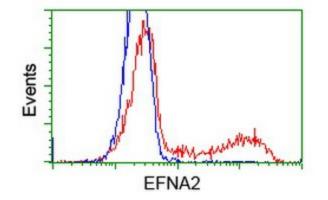

Protein Families: Druggable Genome

Protein Pathways:

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY EFNA2 ([RC213728], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-EFNA2. Positive lysates [LY400546] (100ug) and [LC400546] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC213728] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-EFNA2 antibody ([TA501425]), and then analyzed by flow cytometry.
