CRIGENE L1CAM Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1D12] – TA501440AM

Background:	The protein encoded by this gene is an axonal glycoprotein belonging to the immunoglobulin supergene family. The ectodomain, consisting of several immunoglobulin-like domains and fibronectin-like repeats (type III), is linked via a single transmembrane sequence to a conserved cytoplasmic domain. This cell adhesion molecule plays an important role in nervous system development, including neuronal migration and differentiation. Mutations in the gene cause three X-linked neurological syndromes known by the acronym CRASH (corpus callosum hypoplasia, retardation, aphasia, spastic paraplegia and hydrocephalus). Alternative splicing of a neuron-specific exon is thought to be functionally relevant. [provided by RefSeq]	
Synonyms:	nyms: CAML1; CD171; HSAS; HSAS1; MASA; MIC5; N-CAM-L1; N-CAML1; NCAM-L1; S10; SPG1	
Protein Families: Druggable Genome, ES Cell Differentiation/IPS, Transmembrane		

Protein Pathways: Axon guidance, Cell adhesion molecules (CAMs)

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY L1CAM ([RC211601], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-L1CAM. Positive lysates [LY400150] (100ug) and [LC400150] (20ug) can be purchased separately from OriGene.

Anti-L1CAM mouse monoclonal antibody ([TA501440]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY L1CAM ([RC211601]).

HEK293T cells transfected with either [RC211601] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-L1CAM antibody ([TA501440]), and then analyzed by flow cytometry.
