Background:	Butyrophilin is the major protein associated with fat droplets in the milk. It is a member of the immunoglobulin superfamily. It may have a cell surface receptor function. The human butyrophilin gene is localized in the major histocompatibility complex (MHC) class I region of 6p and may have arisen relatively recently in evolution by the shuffling of exons between 2 ancestral gene families [provided by RefSeq].

Protein Families:

Druggable Genome, Transmembrane

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY BTN1A1 ([RC223852], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BTN1A1. Positive lysates [LY400653] (100ug) and [LC400653] (20ug) can be purchased separately from OriGene.

Anti-BTN1A1 mouse monoclonal antibody ([TA501537]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY BTN1A1 ([RC223852]).

HEK293T cells transfected with either [RC223852] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-BTN1A1 antibody ([TA501537]), and then analyzed by flow cytometry.
