| Background:             | This gene encodes a member of the never in mitosis gene A family of kinases. The encoded protein localizes to the nucleoli, and may function with NEK2A in the S-phase checkpoint. The encoded protein appears to play roles in DNA replication and response to genotoxic stress. Alternatively spliced transcript variants have been described. |
| Synonyms:               | FLJ23495   |

## Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY NEK11 ([RC221953], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NEK11. Positive lysates [LY411057] (100ug) and [LC411057] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC221953] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-NEK11 antibody ([TA501608]), and then analyzed by flow cytometry.
