	Protein Kinase D2 (PRKD2) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3A1] – TA501671AM
Background:	The protein encoded by this gene belongs to the protein kinase D (PKD) family of serine/threonine protein kinases. This kinase can be activated by phorbol esters as well as by gastrin via the cholecystokinin B receptor (CCKBR) in gastric cancer cells. It can bind to diacylglycerol (DAG) in the trans-Golgi network (TGN) and may regulate basolateral membrane protein exit from TGN. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq]
Synonyms:	HSPC187; nPKC-D2; PKD2
Protein Families	: Druggable Genome, Protein Kinase

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PRKD2 ([RC215335], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRKD2. Positive lysates [LY402555] (100ug) and [LC402555] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC215335] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PRKD2 antibody ([TA501671]), and then analyzed by flow cytometry.
