Background:	This gene is a member of the RAB gene family which belongs to the RAS GTPase superfamily. The proteins in the family of RAS-related signaling molecules are small GTP-binding proteins that play important roles in the regulation of exocytotic and endocytotic pathways. This gene maps to the site of an ancestral telomere fusion event and may be a subtelomeric gene. Two alternatively spliced transcript variants have been identified, both encoding the same protein. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RABL2A ([RC211854], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RABL2A. Positive lysates [LY416219] (100ug) and [LC416219] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-RABL2A monoclonal antibody.

Anti-RABL2A mouse monoclonal antibody (TA502018) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY RABL2A ([RC211854]).

HEK293T cells transfected with either [RC211854] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-RABL2A antibody (TA502018), and then analyzed by flow cytometry.

Flow cytometric Analysis of Hela cells, using anti-RABL2A antibody (TA502018), (Red), compared to a nonspecific negative control antibody (TA50011), (Blue).
