|                         | HDAC6 Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI4C5] – TA502030BM   |
|-------------------------|--|
| Background:             | Histones play a critical role in transcriptional regulation, cell cycle progression, and<br>developmental events. Histone acetylation/deacetylation alters chromosome structure and<br>affects transcription factor access to DNA. The protein encoded by this gene belongs to class<br>II of the histone deacetylase/acuc/apha family. It contains an internal duplication of two<br>catalytic domains which appear to function independently of each other. This protein<br>possesses histone deacetylase activity and represses transcription. [provided by RefSeq] |
| Synonyms:               | CPBHM; HD6; JM21; PPP1R90  |
| <b>Protein Families</b> | : Druggable Genome, Transcription Factors  |

## **Product images:**

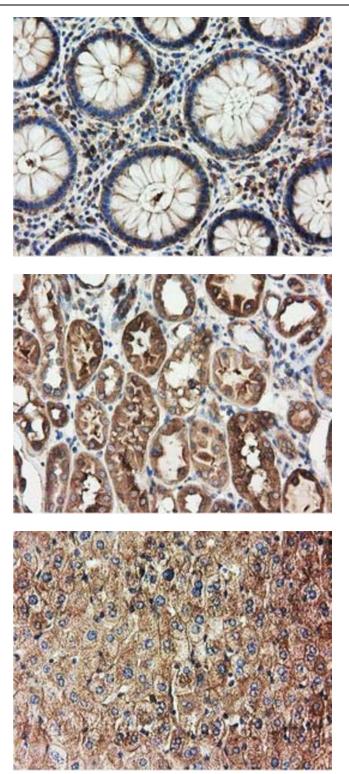

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY HDAC6 (Cat# [RC209649], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-HDAC6(Cat# [TA502030]). Positive lysates [LY401822] (100ug) and [LC401822] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-HDAC6 monoclonal antibody.
