## Serigene MRPS2 Mouse Monoclonal Antibody [Clone ID: OTI4D6] – TA502031S

Background:Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in<br/>protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes)<br/>consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein<br/>to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed.<br/>Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that<br/>the latter contain a 5S rRNA. Among different species, the proteins comprising the<br/>mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which<br/>prevents easy recognition by sequence homology. This gene encodes a 28S subunit protein<br/>that belongs to the ribosomal protein S2 family. [provided by RefSeq]. COMPLETENESS:<br/>complete on the 3' end.

CGI-91; MRP-S2; S2mt

## **Product images:**

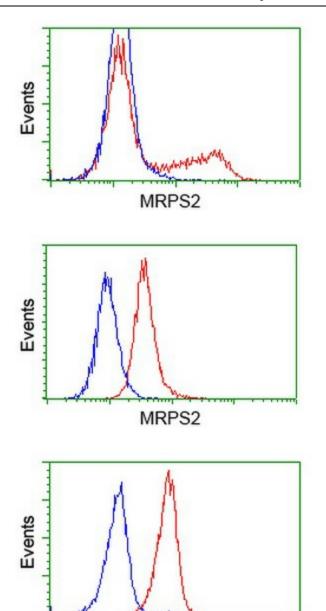

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY MRPS2 (Cat# [RC203579], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MRPS2(Cat# [TA502031]). Positive lysates [LY414231] (100ug) and [LC414231] (20ug) can be purchased separately from OriGene.
