| Background:             | Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones,<br>neurotransmitters, drugs, and xenobiotic compounds. These cytosolic enzymes are different<br>in their tissue distributions and substrate specificities. The gene structure (number and<br>length of exons) is similar among family members. This gene encodes one of two phenol<br>sulfotransferases with thermostable enzyme activity. Multiple alternatively spliced variants<br>that encode two isoforms have been identified for this gene. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SULT1A1 ([RC201601], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SULT1A1. Positive lysates [LY420735] (100ug) and [LC420735] (20ug) can be purchased separately from OriGene.
