#### CRIGENE ATP6V1F Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1B8] – TA502279BM

Background:This gene encodes a component of vacuolar ATPase (V-ATPase), a multisubunit enzyme that<br/>mediates acidification of eukaryotic intracellular organelles. V-ATPase dependent organelle<br/>acidification is necessary for such intracellular processes as protein sorting, zymogen<br/>activation, receptor-mediated endocytosis, and synaptic vesicle proton gradient generation.<br/>V-ATPase is composed of a cytosolic V1 domain and a transmembrane V0 domain. The V1<br/>domain consists of three A and three B subunits, two G subunits plus the C, D, E, F, and H<br/>subunits. The V1 domain contains the ATP catalytic site. The V0 domain consists of five<br/>different subunits: a, c, c', c', and d. Additional isoforms of many of the V1 and V0 subunit<br/>proteins are encoded by multiple genes or alternatively spliced transcript variants. This<br/>encoded protein is the V1 domain F subunit protein. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY ATP6V1F (Cat# [RC210728], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ATP6V1F(Cat# [TA502279]). Positive lysates [LY418132] (100ug) and [LC418132] (20ug) can be purchased separately from OriGene.
