CRIGENE TASP1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1C12] – TA502281AM

Background:This gene encodes an endopeptidase that cleaves specific substrates following aspartate
residues. The encoded protein undergoes posttranslational autoproteolytic processing to
generate alpha and beta subunits, which reassemble into the active alpha2-beta2
heterotetramer. It is required to cleave MLL, a protein required for the maintenance of HOX
gene expression, and TFIIA, a basal transcription factor. Alternatively spliced transcript
variants have been described, but their biological validity has not been determined. [provided
by RefSeq]. COMPLETENESS: complete on the 3' end.

Synonyms: C20orf13; dJ585I14.2

Protein Families: Protease

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TASP1 ([RC206835], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TASP1. Positive lysates [LY402609] (100ug) and [LC402609] (20ug) can be purchased separately from OriGene.
