	Gephyrin (GPHN) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3A6] – TA502312AM
Background:	This gene encodes a neuronal assembly protein that anchors inhibitory neurotransmitter receptors to the postsynaptic cytoskeleton via high affinity binding to a receptor subunit domain and tubulin dimers. In nonneuronal tissues, the encoded protein is also required for molybdenum cofactor biosynthesis. Mutations in this gene may be associated with the neurological condition hyperplexia and also lead to molybdenum cofactor deficiency. Numerous alternatively spliced transcript variants encoding different isoforms have been described; however, the full-length nature of all transcript variants is not currently known. [provided by RefSeq, Jul 2008]
Synonyms:	GEPH; GPH; GPHRYN; HKPX1; MOCODC
Protein Families	Druggable Genome

### **Product images:**

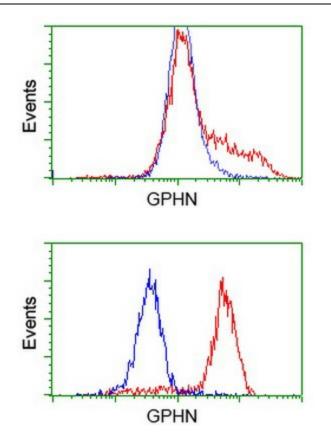

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY GPHN ([RC205986], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-GPHN. Positive lysates [LY402806] (100ug) and [LC402806] (20ug) can be purchased separately from OriGene.
