POLR2J2 Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI3G4] - TA502454BM

Background: This gene is a member of the RNA polymerase II subunit 11 gene family, which includes three genes in a cluster on chromosome 7q22.1 and a pseudogene on chromosome 7p13. The founding member of this family, DNA directed RNA polymerase II polypeptide J, has been shown to encode a subunit of RNA polymerase II, the polymerase responsible for synthesizing messenger RNA in eukaryotes. This locus produces multiple, alternatively spliced transcripts that potentially express isoforms with distinct C-termini compared to DNA directed RNA polymerase II polypeptide J. Most or all variants are spliced to include additional non-coding exons at the 3' end which makes them candidates for nonsense-mediated decay (NMD). Consequently, it is not known if this locus expresses a protein or proteins in vivo. [provided by RefSeq] HRPB11B: RPB11b1 Synonyms:

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY POLR2J2 (Cat# [RC224755], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-POLR2J2(Cat# [TA502454]). Positive lysates [LY409843] (100ug) and [LC409843] (20ug) can be purchased separately from OriGene.

Anti-POLR2J2 mouse monoclonal antibody ([TA502454]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY POLR2J2 ([RC224755]).

HEK293T cells transfected with either [RC224755] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-POLR2J2 antibody ([TA502454]), and then analyzed by flow cytometry.
