GRIGENE VASP Mouse Monoclonal Antibody [Clone ID: OTI1F3] – TA502491M

- Background:Vasodilator-stimulated phosphoprotein (VASP) is a member of the Ena-VASP protein family.
Ena-VASP family members contain an EHV1 N-terminal domain that binds proteins containing
E/DFPPPXD/E motifs and targets Ena-VASP proteins to focal adhesions. In the mid-region of
the protein, family members have a proline-rich domain that binds SH3 and WW domain-
containing proteins. Their C-terminal EVH2 domain mediates tetramerization and binds both
G and F actin. VASP is associated with filamentous actin formation and likely plays a
widespread role in cell adhesion and motility. VASP may also be involved in the intracellular
signaling pathways that regulate integrin-extracellular matrix interactions. VASP is regulated
by the cyclic nucleotide-dependent kinases PKA and PKG. [provided by RefSeq]
- Synonyms: vasodilator-stimulated phosphoprotein
- Protein Families: Druggable Genome, Stem cell Pluripotency
- Protein Pathways: Fc gamma R-mediated phagocytosis, Focal adhesion, Leukocyte transendothelial migration

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY VASP ([RC203544], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-VASP. Positive lysates [LY401150] (100ug) and [LC401150] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-VASP monoclonal antibody.

Equivalent amounts of cell lysates (10 ug per lane) of wild-type HeLa cells (WT, Cat# LC810HELA) and VASP-Knockout HeLa cells (KO, Cat# [LC832038]) were separated by SDS-PAGE and immunoblotted with anti-VASP monoclonal antibody [TA502491] (1:500). Then the blotted membrane was stripped and reprobed with anti-HSP90 antibody as a loading control.
