#### **GRIGENE** RASSF1 Mouse Monoclonal Antibody [Clone ID: OTI9F5] – TA502510S

- Background:This gene encodes a protein similar to the RAS effector proteins. Loss or altered expression<br/>of this gene has been associated with the pathogenesis of a variety of cancers, which<br/>suggests the tumor suppressor function of this gene. The inactivation of this gene was found<br/>to be correlated with the hypermethylation of its CpG-island promoter region. The encoded<br/>protein was found to interact with DNA repair protein XPA. The protein was also shown to<br/>inhibit the accumulation of cyclin D1, and thus induce cell cycle arrest. Several alternatively<br/>spliced transcript variants of this gene encoding distinct isoforms have been reported.<br/>[provided by RefSeq]
- Synonyms:123F2; NORE2A; RASSF1A; RDA32; REH3P21Protein Families:Druggable GenomeProtein Pathways:Bladder cancer, Non-small cell lung cancer, Pathways in cancer

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RASSF1 ([RC213525], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RASSF1. Positive lysates [LY402099] (100ug) and [LC402099] (20ug) can be purchased separately from OriGene.

Anti-RASSF1 mouse monoclonal antibody ([TA502510]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY RASSF1 ([RC213525]).

HEK293T cells transfected with either [RC213525] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-RASSF1 antibody ([TA502510]), and then analyzed by flow cytometry.
