| | GBA3 Mouse Monoclonal Antibody [Clone ID: OTI5G5] – TA502533 |
|----------------|---|
| Background: | GBA3, or cytosolic beta-glucosidase (EC 3.2.1.21), is a predominantly liver enzyme that efficiently hydrolyzes beta-D-glucoside and beta-D-galactoside, but not any known physiologic beta-glycoside, suggesting that it may be involved in detoxification of plant glycosides (de Graaf et al., 2001 [PubMed 11389701]). GBA3 also has significant neutral glycosylceramidase activity (EC 3.2.1.62), suggesting that it may be involved in a nonlysosomal catabolic pathway of glucosylceramide metabolism (Hayashi et al., 2007 [PubMed 17595169]). HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY GBA3 ([RC211035], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-GBA3. Positive lysates [LY402815] (100ug) and [LC402815] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (10ug) from 2 different cell lines by using anti-GBA3 monoclonal antibody (1:200).

Immunohistochemical staining of paraffinembedded Human Kidney tissue within the normal limits using anti-GBA3 mouse monoclonal antibody. Heat-induced epitope retrieval by EDTA solution buffer pH 8.0 at 120°C for 3 min.

HEK293T cells transfected with either [RC211035] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-GBA3 antibody (TA502533), and then analyzed by flow cytometry.

Flow cytometric Analysis of Jurkat cells, using anti-GBA3 antibody (TA502533), (Red), compared to a nonspecific negative control antibody, (Blue).
