# Product datasheet for TA502562

## POLR2J2 Mouse Monoclonal Antibody [Clone ID: OTI8F10]

### **Product data:**

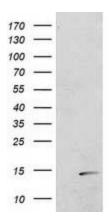

| Product Type:           | Primary Antibodies   |
|-------------------------|--|
| Clone Name:             | OTI8F10  |
| Applications:           | WB   |
| Recommended Dilution:   | WB 1:1000~2000   |
| Reactivity:             | Human, Dog, Rat, Monkey  |
| Host:                   | Mouse  |
| lsotype:                | lgG2a  |
| Clonality:              | Monoclonal   |
| Immunogen:              | Full length human recombinant protein of human POLR2J2 (NP_116581) produced in<br>HEK293T cell.              |
| Formulation:            | PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.   |
| Concentration:          | 0.56 mg/ml   |
| Purification:           | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography<br>(protein A/G) |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at -20°C as received.  |
| Stability:              | Stable for 12 months from date of receipt.   |
| Predicted Protein Size: | 12.9 kDa   |
| Gene Name:              | RNA polymerase II subunit J2   |
| Database Link:          | <u>NP_116581</u><br><u>Entrez Gene 246721 Human</u><br><u>Q9GZM3</u>   |

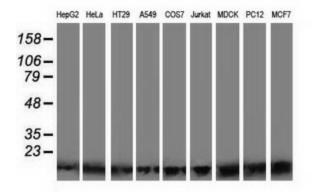

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

|                   | POLR2J2 Mouse Monoclonal Antibody [Clone ID: OTI8F10] – TA502562  |
|-------------------|---|
| Background:       | This gene is a member of the RNA polymerase II subunit 11 gene family, which includes three genes in a cluster on chromosome 7q22.1 and a pseudogene on chromosome 7p13. The founding member of this family, DNA directed RNA polymerase II polypeptide J, has been shown to encode a subunit of RNA polymerase II, the polymerase responsible for synthesizing messenger RNA in eukaryotes. This locus produces multiple, alternatively spliced transcripts that potentially express isoforms with distinct C-termini compared to DNA directed RNA polymerase II polypeptide J. Most or all variants are spliced to include additional non-coding exons at the 3' end which makes them candidates for nonsense-mediated decay (NMD). Consequently, it is not known if this locus expresses a protein or proteins in vivo. [provided by RefSeq] |
| Synonyms:         | HRPB11B; RPB11b1  |
| Protein Families: | Transcription Factors   |
| Protein Pathway   | <b>s:</b> Huntington's disease, Metabolic pathways, Purine metabolism, Pyrimidine metabolism, RNA polymerase  |

#### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY POLR2J2 ([RC224755], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-POLR2J2. Positive lysates [LY409843] (100ug) and [LC409843] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-POLR2J2 monoclonal antibody.
