SSX1 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1E10] – TA502722AM

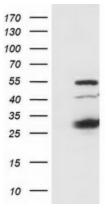

Background:The product of this gene belongs to the family of highly homologous synovial sarcoma X (SSX)
breakpoint proteins. These proteins may function as transcriptional repressors. They are also
capable of eliciting spontaneously humoral and cellular immune responses in cancer
patients, and are potentially useful targets in cancer vaccine-based immunotherapy. SSX1,
SSX2 and SSX4 genes have been involved in the t(X;18) translocation characteristically found
in all synovial sarcomas. This translocation results in the fusion of the synovial sarcoma
translocation gene on chromosome 18 to one of the SSX genes on chromosome X. The
encoded hybrid proteins are probably responsible for transforming activity. [provided by

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SSX1 ([RC201600], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SSX1. Positive lysates [LY417166] (100ug) and [LC417166] (20ug) can be purchased separately from OriGene.
