SULT1C2 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI8A1] – TA502746AM

Background:

Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones, neurotransmitters, drugs, and xenobiotic compounds. These cytosolic enzymes are different in their tissue distributions and substrate specificities. The gene structure (number and length of exons) is similar among family members. This gene encodes a protein that belongs to the SULT1 subfamily, responsible for transferring a sulfo moiety from PAPS to phenolcontaining compounds. Two alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq]

Synonyms: humSULTC2; ST1C1; ST1C2; SULT1C1

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SULT1C2 ([RC202775], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SULT1C2. Positive lysates [LY420736] (100ug) and [LC420736] (20ug) can be purchased separately from OriGene.
