GRIGENE FGFR2 Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI5F7] – TA502829BM

Background:	The protein encoded by this gene is a member of the fibroblast growth factor receptor family, where amino acid sequence is highly conserved between members and throughout evolution. FGFR family members differ from one another in their ligand affinities and tissue distribution. A full-length representative protein consists of an extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The extracellular portion of the protein interacts with fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately influencing mitogenesis and differentiation. This particular family member is a high-affinity receptor for acidic, basic and/or keratinocyte growth factor, depending on the isoform. Mutations in this gene are associated with Crouzon syndrome, Pfeiffer syndrome, Craniosynostosis, Apert syndrome, Jackson-Weiss syndrome, Beare-Stevenson cutis gyrata syndrome, Saethre-Chotzen syndrome, and syndromic craniosynostosis. Multiple alternatively spliced transcript variants encoding different isoforms have been noted for this gene. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY FGFR2 ([RC217098], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FGFR2. Positive lysates [LY400050] (100ug) and [LC400050] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (10ug) from 4 different cell lines by using anti-FGFR2 monoclonal antibody at 1:200 dilution.

Cross-Reactivity of anti-FGFR2 ([TA502829]) with FGFR1 and FGFR3, not with FGFR4.HEK293T cells were transfected with the DDK (FLAG)-tagged DNAs of FGFR2 ([RC217098]), FGFR1 ([RC202080]), FGFR3 ([RC215533]), FGFR4 ([RC204230]) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FGFR2 ([TA502829]). (1:500) and anti-DDK (1:2000), respectively.
