Q15785

Background: The protein encoded by this gene is involved in the import of precursor proteins into

mitochondria. The encoded protein has a chaperone-like activity, binding the mature portion of unfolded proteins and aiding their import into mitochondria. This protein, which is found in the cytoplasm and sometimes associated with the outer mitochondrial membrane, has a

weak ATPase activity and contains 6 TPR repeats. [provided by RefSeg, Jul 2008]

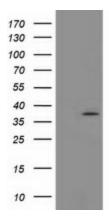

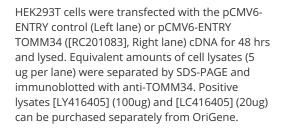

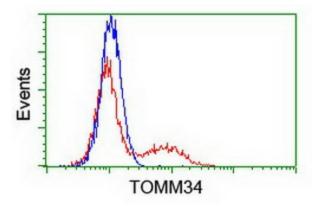

Synonyms: HTOM34P; TOM34; URCC3
