Background:	This gene encodes a thiol-activated peptidase that is phosphorylated in M phase of the cell cycle. Phosphorylation regulates the cell cycle-dependent distribution of this protein, with a fraction of the protein bound strongly to centrosomes in interphase and localized to mitotic spindles in early M phase. Overall, this protein plays a role in nervous system development. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY NDEL1 ([RC212323], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NDEL1. Positive lysates [LY422448] (100ug) and [LC422448] (20ug) can be purchased separately from OriGene.

Anti-NDEL1 mouse monoclonal antibody ([TA503313]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY NDEL1 ([RC212323]).
