## **CCM2** Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1D1] – TA503419AM

### Background:

This gene encodes a scaffold protein that functions in the stress-activated p38 Mitogenactivated protein kinase (MAPK) signaling cascade. The protein interacts with SMAD specific E3 ubiquitin protein ligase 1 (also known as SMURF1) via a phosphotyrosine binding domain to promote RhoA degradation. The protein is required for normal cytoskeletal structure, cellcell interactions, and lumen formation in endothelial cells. Mutations in this gene result in cerebral cavernous malformations. Multiple transcript variants encoding different isoforms have been found for this gene.

Synonyms: C7orf22; OSM; PP10187

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CCM2 ([RC201418], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CCM2. Positive lysates [LY410516] (100ug) and [LC410516] (20ug) can be purchased separately from OriGene.
