#### CRIGENE PTPN7 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI3G2] – TA503626AM

Background:The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)<br/>family. PTPs are known to be signaling molecules that regulate a variety of cellular processes<br/>including cell growth, differentiation, mitotic cycle, and oncogenic transformation. This gene is<br/>preferentially expressed in a variety of hematopoietic cells, and is an early response gene in<br/>lymphokine stimulated cells. The non-catalytic N-terminus of this PTP can interact with MAP<br/>kinases and suppress the MAP kinase activities. This PTP was shown to be involved in the<br/>regulation of T cell antigen receptor (TCR) signaling, which was thought to function through<br/>dephosphorylating the molecules related to MAP kinase pathway. Multiple alternatively<br/>spliced transcript variants have been found for this gene. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PTPN7 ([RC216254], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PTPN7. Positive lysates [LY409137] (100ug) and [LC409137] (20ug) can be purchased separately from OriGene.
