#### **GRIGENE** DAND5 Mouse Monoclonal Antibody [Clone ID: OTI3D4] – TA503675

Background:This gene encodes a member of the BMP (bone morphogenic protein) antagonist family. Like<br/>BMPs, BMP antagonists contain cystine knots and typically form homo- and heterodimers.<br/>The CAN (cerberus and dan) subfamily of BMP antagonists, to which this gene belongs, is<br/>characterized by a C-terminal cystine knot with an eight-membered ring. The antagonistic<br/>effect of the secreted protein encoded by this gene is likely due to its direct binding to BMP<br/>proteins. As an antagonist of BMP, this gene may play a role in regulating organogenesis,<br/>body patterning, and tissue differentiation. In mouse, this protein has been shown to bind<br/>Nodal and to inhibit the Nodal signaling pathway which patterns left/right body asymmetry.<br/>[provided by RefSeq, Jul 2008]

## **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DAND5 ([RC221703], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DAND5. Positive lysates [LY407380] (100ug) and [LC407380] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC221703] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-DAND5 antibody (TA503675), and then analyzed by flow cytometry.
