	Calpain 9 (CAPN9) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2G1] – TA503774BM
Background:	Calpains are ubiquitous, well-conserved family of calcium-dependent, cysteine proteases. The calpain proteins are heterodimers consisting of an invariant small subunit and variable large subunits. The large subunit possesses a cysteine protease domain, and both subunits possess calcium-binding domains. Calpains have been implicated in neurodegenerative processes, as their activation can be triggered by calcium influx and oxidative stress. The protein encoded by this gene is expressed predominantly in stomach and small intestine and may have specialized functions in the digestive tract. This gene is thought to be associated with gastric cancer. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-CAPN9 monoclonal antibody.

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY CAPN9 (Cat# [RC215171], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CAPN9 (Cat# [TA503774]). Positive lysates [LY401979] (100ug) and [LC401979] (20ug) can be purchased separately from OriGene.
