#### **GRIGENE** CENPH Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1D5] – TA503873BM

- Background: Centromere and kinetochore proteins play a critical role in centromere structure, kinetochore formation, and sister chromatid separation. The protein encoded by this gene colocalizes with inner kinetochore plate proteins CENP-A and CENP-C in both interphase and metaphase. It localizes outside of centromeric heterochromatin, where CENP-B is localized, and inside the kinetochore corona, where CENP-E is localized during prometaphase. It is thought that this protein can bind to itself, as well as to CENP-A, CENP-B or CENP-C. Multimers of the protein localize constitutively to the inner kinetochore plate and play an important role in the organization and function of the active centromere-kinetochore complex. [provided by RefSeq, Jul 2008]
- Synonyms: centromere protein H; homolog; kinetochore protein CENP-H; MIND kinetochore complex component; NNF1; PMF1

Protein Families: Druggable Genome

### **Product images:**

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CENPH ([RC204531], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CENPH. Positive lysates [LY402956] (100ug) and [LC402956] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC204531] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-CENPH antibody ([TA503873]), and then analyzed by flow cytometry.
