### **GRIGENE** FBXO21 Mouse Monoclonal Antibody [Clone ID: OTI5H4] – TA504025M

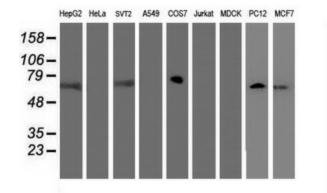

Background:This gene encodes a member of the F-box protein family which is characterized by an<br/>approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four<br/>subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in<br/>phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes:<br/>Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing<br/>either different protein-protein interaction modules or no recognizable motifs. The protein<br/>encoded by this gene belongs to the Fbxs class. Alternative splicing of this gene generates 2<br/>transcript variants. [provided by RefSeq]

Synonyms: FBX21

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY FBXO21 (Cat# [RC223095], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FBXO21(Cat# [TA504025]).

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-FBXO21 monoclonal antibody.
