GIRK1 (KCNJ3) Mouse Monoclonal Antibody [Clone ID: OTI2F2] – TA504137M

Background: Potassium channels are present in most mammalian cells, where they participate in a wide range of physiologic responses. The protein encoded by this gene is an integral membrane protein and inward-rectifier type potassium channel. The encoded protein, which has a greater tendency to allow potassium to flow into a cell rather than out of a cell, is controlled by G-proteins and plays an important role in regulating heartbeat. It associates with three other G-protein-activated potassium channels to form a heteromultimeric pore-forming complex. [provided by RefSeq]

Synonyms: GIRK1; KGA; KIR3.1

Protein Families: Druggable Genome, Ion Channels: Potassium, Transmembrane

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY KCNJ3 ([RC205322], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-KCNJ3. Positive lysates [LY400811] (100ug) and [LC400811] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC205322] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-KCNJ3 antibody ([TA504137]), and then analyzed by flow cytometry.
