TULP3 Mouse Monoclonal Antibody [Clone ID: OTI7B8] – TA504153M

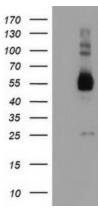

Background:This gene encodes a member of the tubby gene family of bipartite transcription factors.
Members of this family have been identified in plants, vertebrates, and invertebrates, and
they share a conserved N-terminal transcription activation region and a conserved C-terminal
DNA and phosphatidylinositol-phosphate binding region. The encoded protein binds to
phosphoinositides in the plasma membrane via its C-terminal region and probably functions
as a membrane-bound transcription regulator that translocates to the nucleus in response to
phosphoinositide hydrolysis, for instance, induced by G-protein-coupled-receptor signaling. It
plays an important role in neuronal development and function. Two transcript variants
encoding distinct isoforms have been identified for this gene. [provided by RefSeq, May 2009]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TULP3 ([RC207595], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TULP3. Positive lysates [LY418767] (100ug) and [LC418767] (20ug) can be purchased separately from OriGene.
