	GOLPH2 (GOLM1) Mouse Monoclonal Antibody [Clone ID: OTI7B3] – TA504187		
Background:	The Golgi complex plays a key role in the sorting and modification of proteins exported from the endoplasmic reticulum. The protein encoded by this gene is a type II Golgi transmembrane protein. It processes proteins synthesized in the rough endoplasmic reticulum and assists in the transport of protein cargo through the Golgi apparatus. The expression of this gene has been observed to be upregulated in response to viral infection. Alternatively spliced transcript variants encoding the same protein have been described for this gene. [provided by RefSeq]		
Synonyms:	bA379P1.3; C9orf155; GOLPH2; GP73; HEL46; PSEC0257		
Protein Families	: Transmembrane

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY GOLM1 ([RC200086], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-GOLM1. Positive lysates [LY406091] (100ug) and [LC406091] (20ug) can be purchased separately from OriGene.
