Background:	This nuclear gene encodes a mitochondrial protein which belongs to FRATAXIN family. The protein functions in regulating mitochondrial iron transport and respiration. The expansion of intronic trinucleotide repeat GAA results in Friedreich ataxia. Alternative splicing results in multiple transcript variants. [provided by RefSeq]
Synonyms:	CyaY; FA; FARR; FRDA; X25

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY FXN [RC204880], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-FXN. Positive lysates [LY400054] (100ug) and [LC400054] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC204880] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-FXN antibody ([TA504256]), and then analyzed by flow cytometry.

Flow cytometric Analysis of Jurkat cells, using anti-FXN antibody ([TA504256]), (Red), compared to a nonspecific negative control antibody, (Blue).
