Background:	This gene encodes an adaptor protein thought to function in T-cell signal transduction. A related protein in mouse is responsible for the activation of lymphocyte-specific protein-tyrosine kinase and functions in downstream signaling. Alternative splicing results in multiple transcript variants. [provided by RefSeq]

Protein Pathways: VEGF signaling pathway

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SH2D2A ([RC204162], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SH2D2A. Positive lysates [LY418322] (100ug) and [LC418322] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC204162] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-SH2D2A antibody ([TA504381]), and then analyzed by flow cytometry.
