# Product datasheet for TA504389AM

## PSMB9 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1F10]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI1F10
Applications:	FC, WB
Recommended Dilution:	WB 1:500~2000, FLOW 1:100
Reactivity:	Human, Rat, Mouse
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 21-219 of human PSMB9(NP_002791) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Biotin
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	23.1 kDa
Gene Name:	proteasome 20S subunit beta 9
Database Link:	<u>NP_002791</u> <u>Entrez Gene 16912 MouseEntrez Gene 24967 RatEntrez Gene 5698 Human</u> <u>P28065</u>

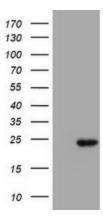

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### SMB9 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1F10] – TA504389AM PSMB9 Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI1F10] – TA504389AM

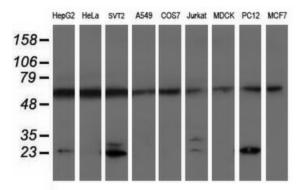

Background:The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S<br/>core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings<br/>are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes<br/>are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an<br/>ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a<br/>modified proteasome, the immunoproteasome, is the processing of class I MHC peptides.<br/>This gene encodes a member of the proteasome B-type family, also known as the T1B family,<br/>that is a 20S core beta subunit. This gene is located in the class II region of the MHC (major<br/>histocompatibility complex). Expression of this gene is induced by gamma interferon and this<br/>gene product replaces catalytic subunit 1 (proteasome beta 6 subunit) in the<br/>immunoproteasome. Proteolytic processing is required to generate a mature subunit.<br/>[provided by RefSeq, Mar

Synonyms:	beta1i; LMP2; PSMB6i; RING12
Protein Families:	Druggable Genome, Protease
Protein Pathways:	Proteasome

### **Product images:**

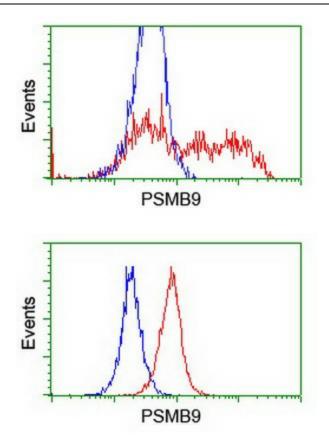

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PSMB9 ([RC209001], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PSMB9. Positive lysates [LY419098] (100ug) and [LC419098] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-PSMB9 monoclonal antibody (HepG2: human; HeLa: human; SVT2: mouse; A549: human; COS7: monkey; Jurkat: human; MDCK: canine; PC12: rat; MCF7: human).

HEK293T cells transfected with either [RC209001] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PSMB9 antibody ([TA504389]), and then analyzed by flow cytometry.

Flow cytometric Analysis of Jurkat cells, using anti-PSMB9 antibody ([TA504389]), (Red), compared to a nonspecific negative control antibody, (Blue).
