CAMLG Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1H3] - TA504636BM

Background: The immunosuppressant drug cyclosporin A blocks a calcium-dependent signal from the Tcell receptor (TCR) that normally leads to T-cell activation. When bound to cyclophilin B, cyclosporin A binds and inactivates the key signaling intermediate calcineurin. The protein encoded by this gene functions similarly to cyclosporin A, binding to cyclophilin B and acting downstream of the TCR and upstream of calcineurin by causing an influx of calcium. This integral membrane protein appears to be a new participant in the calcium signal transduction pathway, implicating cyclophilin B in calcium signaling, even in the absence of cyclosporin. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CAMLG ([RC218292], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CAMLG. Positive lysates [LY419768] (100ug) and [LC419768] (20ug) can be purchased separately from OriGene.

Anti-CAMLG mouse monoclonal antibody ([TA504636]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY CAMLG ([RC218292]).

HEK293T cells transfected with either [RC218292] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-CAMLG antibody ([TA504636]), and then analyzed by flow cytometry.
