Background:	The product of this gene is an essential component of the DNA damage checkpoint, and binds to single-stranded DNA coated with replication protein A that accumulates at sites of DNA damage. The encoded protein interacts with the ataxia telangiectasia and Rad3 related protein, a checkpoint kinase, resulting in accumulation of the kinase at intranuclear foci induced by DNA damage. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ATRIP ([RC223562], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ATRIP. Positive lysates [LY408977] (100ug) and [LC408977] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 9 different cell lines by using anti-ATRIP monoclonal antibody.

Anti-ATRIP mouse monoclonal antibody (TA504642) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY ATRIP ([RC223562]).

HEK293T cells transfected with either [RC223562] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-ATRIP antibody (TA504642), and then analyzed by flow cytometry.
