Syntenin (SDCBP) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2H6] – TA504796BM

Background: The protein encoded by this gene was initially identified as a molecule linking syndecanmediated signaling to the cytoskeleton. The syntenin protein contains tandemly repeated PDZ domains that bind the cytoplasmic, C-terminal domains of a variety of transmembrane proteins. This protein may also affect cytoskeletal-membrane organization, cell adhesion, protein trafficking, and the activation of transcription factors. The protein is primarily localized to membrane-associated adherens junctions and focal adhesions but is also found at the endoplasmic reticulum and nucleus. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY SDCBP (Cat# [RC215390], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SDCBP (Cat# [TA504796]). Positive lysates [LY417182] (100ug) and [LC417182] (20ug) can be purchased separately from OriGene.
