Entrez Gene 22891 Human

Q70YC4

Background: This gene encodes several isoforms which have different expression patterns and functions.

Mutation in this gene is associated with uric acid nephrolithiasis (UAN). Alternatively spliced

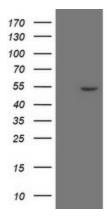

variants, encoding distinct proteins, have been identified. [provided by RefSeq]

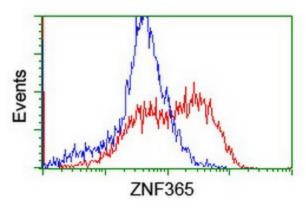

Synonyms: Su48; UAN; ZNF365D

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY ZNF365 ([RC213123], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-ZNF365. Positive lysates [LY414917] (100ug) and [LC414917] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC213123] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-ZNF365 antibody ([TA505049]), and then analyzed by flow cytometry.
