CLEC4E Mouse Monoclonal Antibody [Clone ID: OTI3F4] – TA505160

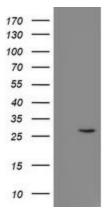

Background:This gene encodes a member of the C-type lectin/C-type lectin-like domain (CTL/CTLD)
superfamily. Members of this family share a common protein fold and have diverse functions,
such as cell adhesion, cell-cell signalling, glycoprotein turnover, and roles in inflammation and
immune response. The encoded type II transmembrane protein is a downstream target of
CCAAT/enhancer binding protein (C/EBP), beta (CEBPB) and may play a role in inflammation.
Alternative splice variants have been described but their full-length sequence has not been
determined. This gene is closely linked to other CTL/CTLD superfamily members on
chromosome 12p13 in the natural killer gene complex region. [provided by RefSeq].
COMPLETENESS: complete on the 3' end.

Synonyms: CLECSF9; MINCLE

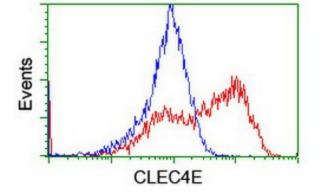

Protein Families:

Druggable Genome, Transmembrane

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CLEC4E ([RC200244], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CLEC4E. Positive lysates [LY415339] (100ug) and [LC415339] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC200244] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-CLEC4E antibody (TA505160), and then analyzed by flow cytometry.
