| Background: | This intronless gene encodes a transcription factor that is a member of the high mobility group (HMG)-box family of DNA-binding proteins. This protein is the testis-determining factor (TDF), which initiates male sex determination. Mutations in this gene give rise to XY females with gonadal dysgenesis (Swyer syndrome); translocation of part of the Y chromosome containing this gene to the X chromosome causes XX male syndrome. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SRY ([RC210382], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SRY. Positive lysates [LY418872] (100ug) and [LC418872] (20ug) can be purchased separately from OriGene.

Anti-SRY mouse monoclonal antibody ([TA505268]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY SRY ([RC210382]).
