	Serum Amyloid P (APCS) Mouse Monoclonal Antibody [Clone ID: OTI5A9] – TA505350M
Background:	The protein encoded by this gene is a glycoprotein, belonging to the pentraxin family of proteins, which has a characteristic pentameric organization. These family members have considerable sequence homology which is thought to be the result of gene duplication. The binding of the encoded protein to proteins in the pathological amyloid cross-beta fold suggests its possible role as a chaperone. This protein is also thought to control the degradation of chromatin. It has been demonstrated that this protein binds to apoptotic cells at an early stage, which raises the possibility that it is involved in dealing with apoptotic cells

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY APCS ([RC202802], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-APCS. Positive lysates [LY400617] (100ug) and [LC400617] (20ug) can be purchased separately from OriGene.

Anti-APCS mouse monoclonal antibody ([TA505350]) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY APCS ([RC202802]).
